

ALL FOR ONE GROW FAST PACKAGE

Build a **digital foundation** for your business to grow. In one project, launch a modern ERP system, an analytical and reporting platform and an environment for process integration. The All for One GROW Fast Package is a solution for those who see technology as a source of competitiveness in the market.

From 1 160 000 PLN

HOW COMPANIES BENEFIT FROM SAP CLOUD SOLUTIONS

Your business is growing, but you feel that there are no structured processes in its „back office“?

Do you operate in the e-commerce industry, fintech, provide services for business or for the public? By now, you probably know how important technology is to your operations. But that's not all. The company also needs solutions that organize the sphere of the broadly understood back office – including finance, analytics and reports.

Are you looking for solutions that adapt to your needs?

Do you want a flexible payment model that will allow you to scale costs depending on the needs of your business? Do you want to be sure that the chosen system will be suitable in a few years, regardless of the pace of your company's development?

AI in SAP Cloud ERP – turn data into action

In today's fast-moving market, speed and accuracy matter more than ever. With AI capabilities in SAP Cloud ERP, your business can automate time-consuming tasks, uncover valuable insights faster, and react to opportunities before the competition does. From smarter forecasting to better process control, AI helps you reduce manual effort, boost agility, and empower your teams to focus on growth, innovation, and customer value.

SAP – the perfect solution for digital masters

If these challenges sound familiar, consider SAP solutions dedicated to companies that focus on technology-supported development. With SAP, you will provide your company with an unlimited path to growth and success in the digital marketplace.

WHY SAP

WHY DO MODERN COMPANIES CHOOSE SAP?

1

Long-term development strategy. SAP is the global leader in enterprise IT software. SAP not only keeps up with trends, but also creates them itself. By choosing SAP, you get access to a solution that will be developed and constantly enriched with new capabilities.

2

A wide portfolio of solutions. SAP is not only an ERP system, it is a family of dozens of services that allow you to comprehensively manage every aspect of the company's operations. On top of that, SAP provides a flexible integration platform so you can connect all your applications into one agile organism. And also – implement effective scenarios of cooperation with partners, customers and suppliers.

3

A global solution. SAP is a system, ideal for companies operating on the international market. Regardless of where your companies are located, SAP ensures operational compliance, compliance with local regulatory requirements in more than 100 countries, and more than 40 language versions.

4

Rich partner ecosystem. The SAP ecosystem consists of hundreds of global and local partners around the world. The partners offer implementation and integration services, as well as complementary solutions. This ensures that you will never be dependent on a single service provider.

MORE THAN FUNCTION

ALL FOR ONE GROW FAST PACKAGE

For organizations that focus on technology as the foundation of growth, we have prepared the **All for One GROW Fast Package**, in three different T-sizes:

- **S:** consists of SAP Cloud ERP system with embedded AI and gen AI (Joule) capabilities (for fast time to value this approach assumes introducing SAP verified prescribed scope of 70 processes with possibility to extend to further processes and functionalities in next phases)
- **M:** consists of SAP Cloud ERP system with embedded AI and gen AI (Joule) capabilities (the same assumption as above) and reporting platform with All for One predefined reports
- **L:** consists of an ERP system, a reporting platform and an integration environment.

WHAT IS IT AND HOW IS IT IMPLEMENTED?

SAP Cloud ERP is a ready-to-run cloud ERP system that provides access to the latest and best industry practices and continuous innovation. It is an advanced solution that comprehensively supports business management. It offers all the necessary functions to support order-to-cash processes, which cover the full order fulfillment cycle from the moment of its placement, through invoicing, to the finalization of payment. The system also effectively manages purchasing processes – **source-to-pay** – from identifying needs, through selecting suppliers and placing orders, to collecting and settling invoices. In addition, SAP Cloud ERP integrates advanced financial modules, enabling precise **management of accounting**, financial reporting, and **cost and revenue analysis**. This enables businesses to achieve higher operational efficiency, better control over business processes, and faster decision-making based on reliable data.

- **Best practices and market standards:** Design and implementation based on proven best practices.
- **Fit-to-Standard:** Instead of starting from scratch, you use ready-made, proven solutions.
- **Embedded AI functionalities:** Built-in automation and decision support across ERP processes, including predictions, recommendations and anomaly detection
- **SAP Activate Implementation Methodology:** A framework with clearly defined tasks for the customer, partner and SAP, including project management know-how.
- **Cloud Mindset:** An innovative approach; the client appreciates the value of ready-made solutions and adapts business processes to the system processes.
- **Continuous innovation:** The customer has access to the latest innovations on the same day thanks to semi-annual updates provided by SAP.

ANALYTICS AND REPORTING PLATFORM – **SAP ANALYTICS CLOUD STARTER PACK**

SAP ANALYTICS CLOUD (SAC) is a unique solution in SAP's analytical offer, which combines three basic analytical functions – reporting, planning and prediction. Thanks to the live connection to the ERP system (SAP Cloud ERP), reporting is carried out:

- on current data
- without the need to refresh them
- taking into account the authorizations defined in the source system

All for One SAC Starter Pack allows you to launch a set of 4 key reports (stories) in SAP Analytics Cloud in a few weeks and at a low cost. These reports include:

- Sales data (invoices and orders)
- Materials management and purchasing data
- Accounts payable and accounts receivable
- Cost controlling

These reports allow you to track basic quantities such as:

- Sales volume of individual products or services
- Open orders
- Inventory
- Monitoring of overdue purchase and sales invoices
- What are your costs and how it compares to your budget
- Account turnover in accordance with the guidelines of the Accounting Act

All this creates the basis for making quick and right business decisions.

SAP INTEGRATION SUITE

SAP Integration Suite is a cloud-based solution that **allows you to flexibly combine business applications** based on various technologies into one integrated organism. This applies to internal systems as well as platforms for cooperation with suppliers and customers. Integration with dedicated industry solutions, such as online stores, ensures up-to-date and consistent data across the entire system landscape. Thanks to this, your decisions based on management reports will be quick and accurate.

SAP Integration Suite is a middleware solution that supports the integration of processes between any IT systems, using open standards and modern integration technologies (Web Services, Groovy, REST, XML, JSON, etc.). SAP Integration Suite is part of the SAP Business Technology Platform (BTP) - a platform used to configure and manage the entire cloud ecosystem, both business and development.
